Congratulations on your home furnishings purchase!

This collection features marble tops that have been harvested from natural stone quarries. Marble is a beautiful stone that with proper care can provide years of natural beauty and service to your home.

Characteristics

Just like snowflakes or fingerprints, each piece of marble is unique and has natural characteristics including color variations, veining and hairline cracks. These variations are not defects, but natural characteristics of the stone that add to its beauty and make each piece truly one-of-a-kind.

Maintenance

The surface of the marble on this table has been polished and sealed to create a beautiful, generally non-porous surface. To maintain this non-porous surface, it is recommended to seal the tops on a regular basis (every 6 to 12 months). A good quality stone sealer can be purchased from any tile/stone store or any home care store and should be applied according to the manufacturer's recommendation.

In general, treating marble surfaces the same as wood surfaces is a great rule of thumb.

To maintain the beauty of your marble:

- Protect surfaces from scratching, staining and etching by
 - Keeping them free of debris or sharp objects
 - Wiping up spills immediately
 - Avoiding contact with chemicals (particularly acid-based materials)
 - Do not use the stone for a cutting surface as this will damage the stone and void any warranty
- Clean with PH neutral products or those especially formulated for use on stone.
- It is not recommended to use a water-based solvent for dark marble as it will remove the polish from the surface.
